Our Environmental Policy

Environmental Policy

The AGITO Medical Environmental Policy is a core operating element for the operations of the entire organization. The AGITO Medical Environmental Policy is a living document, and it is reviewed and updated to meet the needs of our stakeholders and the environment.

AGITO Medical believes that sustainable development is one of the most challenging issues facing the world and is committed to continuously exploring solutions to successfully balance economy and ecology.

Policy

AGITO Medical is committed to the protection of the environment, including prevention of pollution, reuse of materials and providing access-to solutions to increase the usage of each individual system and act as an innovative, flexible alternative to buying a brand-new piece of equipment.

AGITO Medical operates with a circular business model to use natural resources more effectively, enabling the transition from the linear model of Take → Make → Dispose to a circular model of Make → Use → Recycle.

AGITO Medical establishes technically and economically viable objectives to optimize the environmental performance of the organization's products, services and activities.

The purpose of the AGITO Medical business model is keeping products, parts and materials at their highest utility and value at all times, circulating between customers.

AGITO Medical is committed to complying with all applicable laws and regulations and is prepared to enter into voluntary agreements.

AGITO Medical adheres to sustainability objectives such as reduction of emissions into air and water, optimal use of energy and water, reducing or eliminating hazardous substances, recycling and waste disposal.

AGITO Medical maintains sustainability reporting on resource consumption, circular materials management and emissions and is subject to audits by means of a systematic, documented verification process to ensure continuous improvement.

Our Sustainability Commitments

Health and wellbeing for all

AGITO Medical serves customers on most continents. The resale of pre-owned equipment and spare parts at accessible cost enables access to care for people in underserved communities.

Circular economy

The purchasing and sale of pre-owned equipment and spare parts contributes to the responsible repurposing of resources and maximizing the lifetime value of products and solutions while minimizing the use of new materials and resources thus eliminating waste.

In continuation of that notion, our rental solutions utilize an access-based business model, where customers access the function or performance of a product, rather than owning them - ensuring a better utilization of resources. Greater deployment of imaging rentals also effectively increases the usage of each individual system and act as an innovative, flexible alternative to buying a brand-new piece of equipment.

Climate action

By ensuring the reuse and recycling of materials, AGITO Medical reduces the carbon footprint for the production of new products, contributing to climate action.
